Find the Duplicate Number - Leet

https://leetcode.com/problems/find-the-duplicate-number/

Problem List<>Submit

DescriptionEditorialSolutionsSubmissions

287. Find the Duplicate Number

Solved

MediumTopicsCompanies

Given an array of integers `nums` containing `n + 1` integers where each integer is in the range `[1, n]` inclusive. There is only **one repeated number** in `nums`, return *this repeated number*.

You must solve the problem **without** modifying the array `nums` and using only constant extra space.

Example 1:

Input: `nums = [1,3,4,2,2]`
Output: `2`

Example 2:

Input: `nums = [3,1,3,4,2]`
Output: `3`

Example 3:

Input: `nums = [3,3,3,3,3]`
Output: `3`

Constraints:

25.3K492180 Online

Code

JavaAuto

```
1 class Solution {
2     public int findDuplicate(int[] nums) {
3         int slow = nums[0];
4         int fast = nums[0];
5
6         // Phase 1: Find intersection
7         do {
8             slow = nums[slow];
9             fast = nums[nums[fast]];
10        } while (slow != fast);
11
12        // Phase 2: Find entrance to cycle
```

DescriptionEditorialSolutionsSubmissions

56. Merge Intervals

MediumTopicsCompanies

Given an array of intervals where `intervals[i] = [starti, endi]`, merge all overlapping intervals, and return an array of the non-overlapping intervals that cover all the intervals in the input.

Example 1:

Input: `intervals = [[1,3],[2,6],[8,10],[15,18]]`
Output: `[[1,6],[8,10],[15,18]]`
Explanation: Since intervals `[1,3]` and `[2,6]` overlap, merge them into `[1,6]`.

Example 2:

Input: `intervals = [[1,4],[4,5]]`
Output: `[[1,5]]`
Explanation: Intervals `[1,4]` and `[4,5]` are considered overlapping.

Example 3:

Input: `intervals = [[4,7],[1,4]]`
Output: `[[1,7]]`
Explanation: Intervals `[1,4]` and `[4,7]` are considered overlapping.
